

DESCRIPTION

Kab-O-Lok™ is an innovative cable locking device used as part of a lockout/tagout program to lock valve wheels, levers and electrical switchgear actuators.

FUNCTION

The design introduces new features not previously found on cable locking devices of this style

Cable End ferrule protects the user against the risk of cuts from frayed cable ends.

The operating tool can be locked into the main unit body to prevent loss, and ensures availability on hand.

A single operating tool can be used on multiple lockout locations.

Lock washer permanently secures the clamp wheel onto the base as one unit, eliminating accidental loss.

Simple cable stowage clip on the rear face of the device.
